

TRAINING, PACKING AND MACHINING: PROVIDING A FULL SERVICE FOR ION SCIENCE

About ION Science

ION Science is a company that specialises in manufacturing advanced gas detection and monitoring instruments. Their products are used across various industries, including environmental, industrial, firefighting, and personal safety. ION Science's devices are designed to detect and measure a wide range of volatile organic compounds (VOCs), toxic gases, and other hazardous substances in the air.

Their instruments are known for their accuracy, reliability, and durability, making them valuable tools for ensuring safety and environmental compliance in various settings.

The Brief

ION Science required help from our team to address issues with damage occurring to their products during transit. Additionally, they needed advice on how they could form the components we had supplied in house.

The Solution

Initially, our team reviewed the packaging options and inspected the stock to assess the occurrence of the issue. Different approaches were discussed for forming the components, and we recommended a suitable approach.

We were there to support ION Science in developing the process and address any issues that arose. We also recommended the best presses to help them form their own components in-house and provided training to their staff once the presses were installed.

“ION Science found our service, products, and delivery to be excellent. They appreciated the wealth of experience on offer and the multiple options provided to solve their forming issues. ION Science also commended our staff for their effective communication and assistance throughout the process.”
